

ADOA

KNEE SUPPORT---K001

K001 helps to prevent sprains, strains, and other forms of knee instabilities. The knee support is intended to provide the support, compression and warmth that are necessary for healing and it is designed so as to be unnoticed under clothing.

KNEE STABILIZER---K002

K002 conforms to the contours of the knee. The four metal straps inserted around the outer area of the brace improve joint stability, assists with flexibility, and helps with joint movement. The unique nature of the brace's neoprene material retains heat and provides warmth for an injured individual. The knee stabilizer brace may be fitted on the right or the left knee. This is a one-size fits most design.

KNEE SUPPORT---K004

K004 is intended to provide support, compression and customized patella support. Moreover, the knee brace contains an ergonomic design that holds the contours of the kneecap. The brace goes unnoticed when worn under clothing and thus can be used on a daily basis. This brace is also a one size fits most and can be used on both left and right knee.

KNEE STABILIZER---K005

K005 may be used in situations involving knee instability, sprains, arthritis, osteoarthritis, or other sorts of joint pains. In addition, a buttress stabilizer is also ergonomically inserted into the knee stabilizer brace design so that maximum support is given to the patella during a person's everyday activities.

KNEE STRAP---K007

K007 may reduce soreness and swelling resulting from diseases such as patellar tendonitis and Osgood Schlatter. The knee straps apply constant compression at the patellar tendon and improve patellar tracking. The knee straps are adjustable for different leg sizes.

HINGED KNEE WRAP---K008

K008 features hinged splints running up the medial and lateral sides of the knee joint. The hinged knee wrap provides premium-stabilizing support to a weak knee and allows the user to easily wear and remove the wrap. The two buttress straps wrap around the circumference of the lower leg and upper calf to ensure a more superb fitting. The knee wrap is designed for people with sprains, strains or other sport injuries.

THIGH SLEEVE---K010

K010 is ideal for relieving soreness and stiffness of the quadriceps and hamstring muscles. The sleeve works by applying compression and retaining warmth to the thigh. The sleeve's thin material and pull-on design gives it a low profile and makes it easy to be worn underneath all types of clothing.

KNEE SUPPORT---K011

K011 is composed of both elastic and breathable materials that allow it to conform to the contours of the knee. The knee brace assists an individual with a knee condition that has been strained over an extended period of time by assisting with an individual's flexibility and joint movement while simultaneously eliminating discomfort caused by stifling heat.

KNEE SUPPORT---K012

K012 has an X-crossing design used to improve joint stability while not compromising any freedom of movement. It also includes an elastic band to give more compression support. The brace has an ergonomically circular cutout design to enhance the extension and strength of the person's leg. The knee brace is intended to support the knee joint and to help prevent the cartilage from re-tearing. It also aims to reduce the pain of the patella.

HINGED KNEE BRACE---K013

K013 contains a buttress stabilizer that is ergonomically inserted into the brace so that maximum support is given to the patella. In addition, the brace also has a low profile so that it may be worn on a daily basis while providing support to the joint movement. The brace may be used in situations involving knee instability, sprains, arthritis, osteoarthritis and/or other sorts of joint pains.

KNEE SUPPORT---K014

K014 is made with breathable neoprene materials that allow it to conform to the contours of the knee. It includes a natural shape and fits to the curves of the patella. The knee brace assists an individual with a knee condition that has been strained over an extended period of time by assisting with an individual's flexibility and joint movement.

NIGHT LINE KNEE---K016

K016 helps to improve one's sleep quality by relieving knee pain during the night. The support is made from a soft, cushioned and breathable foam material that helps to hold the knee in a neutral position throughout the night. The knee support is suitable for individuals who sleep on his/her sides and/or back.

SPORT KNEE STABILIZER---K017

K017 helps to bolster the knee during exercise and activity. It gives stability and comfortable prop to the knee joint while allowing for full range of movement. The V shape buttress straps gives tracking support for the patella. The knee stabilizer is suitable for the arthritis, minor tendon and other knee injuries.

KNEE SUPPORT---K018

K018 is an excellent solution to help prevent knee sprains, strains and instabilities. It is made to retain heat for warmth for quicker healing and recovering rate at the applied region. The open patella design with extra cushioning layer around the hole can better position knee joint and improve protection and comfort.

ELASTIC KNEE SUPPORT---K301

K301 is suitable for those with neoprene allergies. The knee support is knitting with breathable and elastic yarn material with no seams, and provides an evenly dispersed amount of compression to support for weak and injured knees. It may be worn interchangeably between the right and left knee.

ELASTIC KNEE STABILIZER---K302

K302 can help support the knee joint during physical activities. The front silicone pad serves as a cushioning buttress to the kneecap. The two metal rods on either side of the knee stabilizer add stability and assist with increased flexibility of one's joint movement.

ELASTIC KNEE SUPPORT---K303

K303 is designed to fit the contours of the knee. The soft silicone pad helps for the kneecap to its corrected position. Suitable for ones with knee injuries and instabilities, minor sprains, arthritis and minor tendonitis. The elastic knee stabilizer is a good alternative to neoprene products due to its better breath ability and portability than the neoprene siblings.

ELASTIC KNEE SUPPORT---K601

K601 is designed to provide support and compression. This brace is intended for knee injuries and instabilities, minor sprains, arthritis and minor tendonitis. This brace is a good solution for those with allergies to neoprene or individuals who do not require the warmth retention necessary for healing that the neoprene material provides.

ELASTIC KNEE STABILIZER---K602

K602 conforms to the contours of the knee. The two metal strays inserted around the outer area of the knee stabilizer improve joint stability, assist with flexibility and help with joint movement. The elastic knee stabilizer is a good solution for those with allergies to neoprene. The elastic knee stabilizer can be worn on either knee.

ELASTIC KNEE SUPPORT---K603

K603 is breathable, comfortable and may be used in situations involving, minor injuries and sprains, knee instabilities, arthritis and minor tendonitis. The brace's overall design isn't compromised because given its lightweight material, it goes unnoticed when worn under clothing and thus may be used on a daily basis.

WRIST SUPPORT---W001

W001 is intended to provide comfort for those suffering from tendonitis, sprains, arthritis and other types of wrist pains. The wrist brace provides the necessary compression to the injured area by wrapping around the wrist and providing the warmth necessary for healing. The brace is designed so that one size fits all and also for an extended period of use given its lightweights.

WRIST SUPPORT---W003

W003 is designed for use in everyday activities and sports. The wrist brace is embedded with splits that allow the wrist to rest in its natural position and consequently help to relieve any pain and to reduce reoccurrences of preexisting injuries. The wrist brace also has heat retaining padding that provides sturdy and comfortable reinforcement for individuals suffering from an injured wrist or carpal tunnel syndrome.

WRIST BRACE---W004

W004 includes an aluminum splint designed to stabilize the wrist and arm in an ergonomically healthy alignment. The combined effect of the splint and the foam based prevents the continuation of improper and hazardous postures and offers the hand a relief from any carpal tunnel symptoms. The wrist brace requires no laces to tie, is simple to put on, and is suitable for daily long term wear.

* Private labeling is available upon request *

THUMB STABILIZER---W017

W017 is designed to steady an injured thumb and to relieve pains of arthritis. The stabilizer features an aluminum splint with a fastening strap designed to immobilize the injured thumb. Made with a comfortable neoprene blend material, the thumb stabilizer retains the warmth to one's injured thumb and protects one's wrist against abrasion and scrapes. It is reversible and may be used for both the right and left thumb.

WRIST BRACE---W019

W019 may be used to ease soreness resulting from carpal tunnel syndrome and tendonitis. Designed with an aluminum splint running down the brace, the wrap effectively supports the wrist. The long Velcro strap allows for various size adjustments to accommodate different hand sizes.

ELASTIC WRIST SUPPORT---W301

W301 is designed with a silicone padding fitted inside the brace to give more comfort and cushion to the wrist. The wrist support may be used during the recovery period of wrist injuries.

ELASTIC WRIST SUPPORT---W601

W601 is designed to strengthen the wrist, to soothe soreness in the same area and may be used for preventative measures. It can also be used in cases of carpal tunnel syndrome and tendonitis. The breathable and comfortable materials used offer a great solution for those with allergies to neoprene or individuals who do not require the warmth retention necessary for healing.

BACK

BACK STABILIZER---B001

B001 offers exceptional back support and assistance for those who suffer from continuous back pains and poor postures. By helping to stabilize the lumbar vertebrae, sacral and abdominal muscles and ligaments, the back brace relieves extra stress and tension from the lower back.

BACK STABILIZER---B002

B002 is made for both daily use and sporting injuries. The back brace provides extra stability to the back's lumbar region. It may also be used as a precautionary measure in situations where light weight lifting is involved. The back brace slim design allows it to be worn unnoticed underneath clothing.

BACK STABILIZER---B004

B004 is made up of netted neoprene material that amplifies ventilation and at the same time expels any humidity. The back brace contains a number of stabilizing springs to promote optimal back support while not interfering with an individual's ease of movement. The ergonomic design of the back brace reduces the potential harm that results from repeated motions of heavy lifting. Moreover, it may help alleviate some pain that may increase as inflammation develops in cases of acute back pain.

* Private labeling is available upon request *

BACK STABILIZER---B005

B005 has a number of fortifying springs that are strategically positioned to reinforce and stabilize the hip and waist area. The back brace's purpose is also executed through the design of the two elastic bands that give additional bolster and boost to an individual's endurance level. Its aim is to strengthen the lower back because it stabilizes one's posture while allowing for lower back mobility.

SWEAT BELT---B006

B006 is a snug-fitting band made of a high quality neoprene material that is designed to wrap around the lower abdomen and hip. The sweat belt may be used to warm up the muscles before exercise and to improve one's sweat circulation during exercise.

TENNIS ELBOW---E001

E001 addresses the first priority in the healing process by providing compression with its support pad. The compression reduces the swelling, which is of utmost importance in minimizing the long-term damages of the tendon. The tennis elbow brace also has strategically positioned inserts that help to control the rotation and extension of the arm.

ELBOW SUPPORT---E002

E002 can help in many ways because it is designed to contour and cradle an individual's elbow. The elbow brace can be used to protect the joint, stabilize the surrounding muscles, lessen any pain in the elbow region and help to support the joint and muscles while in motion.

ELBOW SUPPORT---E003

E003 may be used for preventative measures such as in situations where repetitive motions are involved and where such motions result in a strained or injured elbow. In addition, the elbow brace is designed to function as a form of support that assists the tendon, muscles and bones in one's arm and elbow.

ELBOW SUPPORT---E005

E005 is anatomically designed to provide maximum support and comfort for the elbow. The low profile cushions one's elbow so that the brace may be comfortably worn for an extended period of time as one's engage in the daily activities. With its stretchable webbing, the elbow brace may be used interchangeable between the left and right arm.

TENNIS ELBOW---E006

E006 may be used to relieve forearm pain. The pad cushion provides compression and stabilizing protection on elbow tendons and muscles to help provide relief. The tennis elbow made with adjustable fasteners for custom fit and it is easy to put on and take off.

ELASTIC ELBOW SUPPORT---E601

E601 is designed to function as a form of support to assist the tendons and muscles around one's elbow and arm. Specifically, the elastic elbow brace facilitates the elbow and arm in its range of movements and motion. This product is an ideal alternative for those with allergies to neoprene.

ANKLE SUPPORT---A001

A001 is designed to be lightweight so that it may be worn on a daily basis and may fit inside most shoes. The ankle brace helps to reduce swelling during daily activities and movement by keeping the ankle muscles warm and by reducing the stressful impact of one's body on the ankle. With its fully adjustable strap, the ankle brace may be tightened or loosened to tailor to the needs of a particular activity.

ANKLE STABILIZER---A002

A002 is ergonomically designed to increase blood flow to the injured area. The trim and inconspicuous design of the ankle brace makes it easy to fit inside most shoes and may be worn every day. Furthermore, the ankle brace may be worn for preventative measures in order to decrease the likelihood of unsafe ankle motions from taking place.

ANKLE SUPPORT---A003

A003 has a high quality inner lining and is sewn in the arch support area in order to provide extra support and to anchor sore, arthritic and/or sprained ankles. The ankle brace may be tightened or loosened to tailor to the needs of a particular activity and may be worn on either ankle and with the adjustable heel strap.

ANKLE SUPPORT---A007

A007 is both lightweight and comfortable for all daywear. The brace may be worn for rehabilitative purposes and also for preventative measures. Specifically, the strong Velcro fasteners ensure a sturdy fit that prevents the rolling of the ankle and limits additional stress to the joint area.

ANKLE STABILIZER---A008

A008 has specifically strong Velcro fasteners to ensure a sturdy fit that prevents the rolling of the ankle and to limit additional stress to the joint area. The ankle brace may be worn on either ankle and with the adjustable heel strap; the compression level may be adjusted for the preferred tightness.

ELASTIC ANKLE SUPPORT---A601

A601 allows for freedom of movement while simultaneously providing the wearer with consistent protection. It is a great solution for those with allergies to neoprene. The two-way elastic ankle support design is intended for everyday use as it is first extremely durable, comfortable and may fit inside most shoes.

* Private labeling is available upon request *

WRIST / ANKLE WEIGHTS

The weights are designed for comfort and performance while exercising. With adjustable fit and design, these weights are perfect for all genders. The ankle/wrist weights are great for adding extra resistance to the fitness and rehabilitation training programs.

YOGA EXERCISE MAT

The exercise mat is a quality piece of fitness equipment for Pilates, Yoga and other forms of floor exercises. The mat provides stability on hard or soft surfaces. It is designed to be slip resistant, yet non-sticky while in performance. Dimensions: 71" x 23" x 1/8"

YOGA & FITNESS TUBE

The yoga & fitness tube is ideal workout equipment that may be used for strength training, flexibility building and rehabilitative purposes. The tube is reinforced with foam handle grips for ease of use. The fitness tube is available in various resistance levels.
